FIRETS 法瑞测试设备

FRTS-6246-P

Fire Hose Pressure and Burst Test System

Fire Hose Pressure and Burst Test System

FIRE HOSE / HYDROSTATIC TESTING

Capture the pressure history of a fire-hose test.

Perform pressure, hold and burst tests on lined fire hoses while recording the pressure response. The pump system, connections, fixtures and instrumentation are selected for the hose diameter and required procedure.

Principle

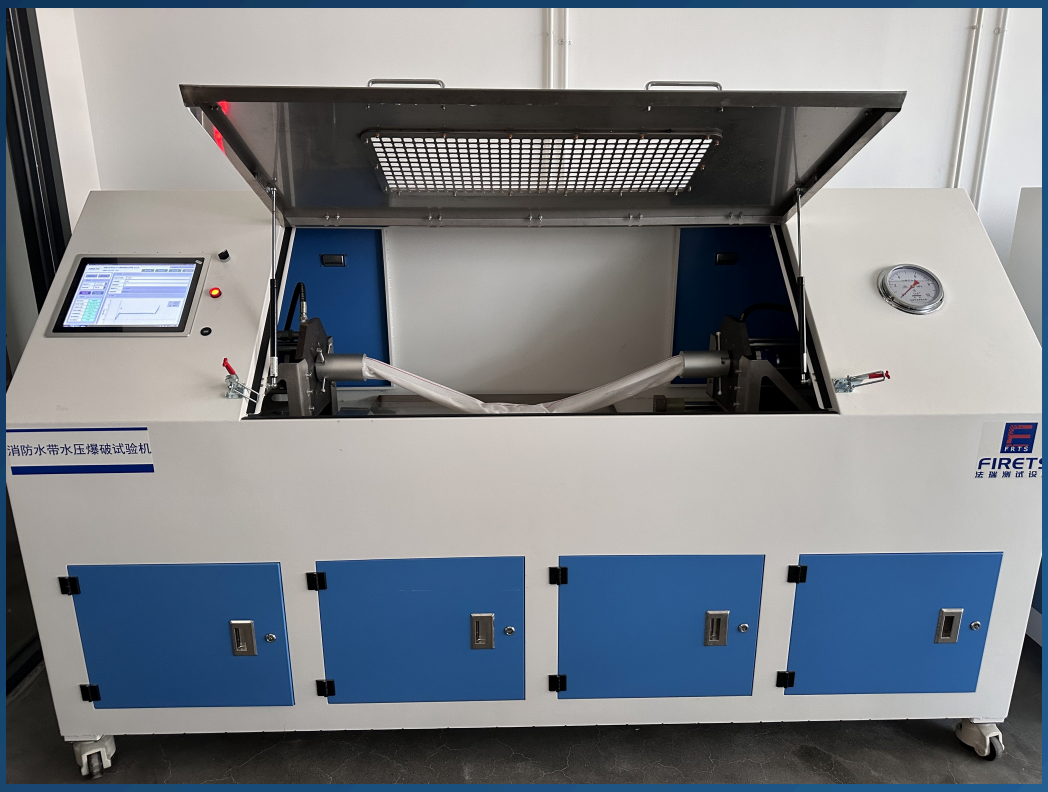

The hose is filled and air is removed before controlled pressurisation or pressure holding.

System

Water supply and pressurisation, pressure sensor, control valves, specimen connections and a protected test area, with drainage and.

Application

Fire-hose development and pressure-performance evaluation across specified hose sizes and connection types.

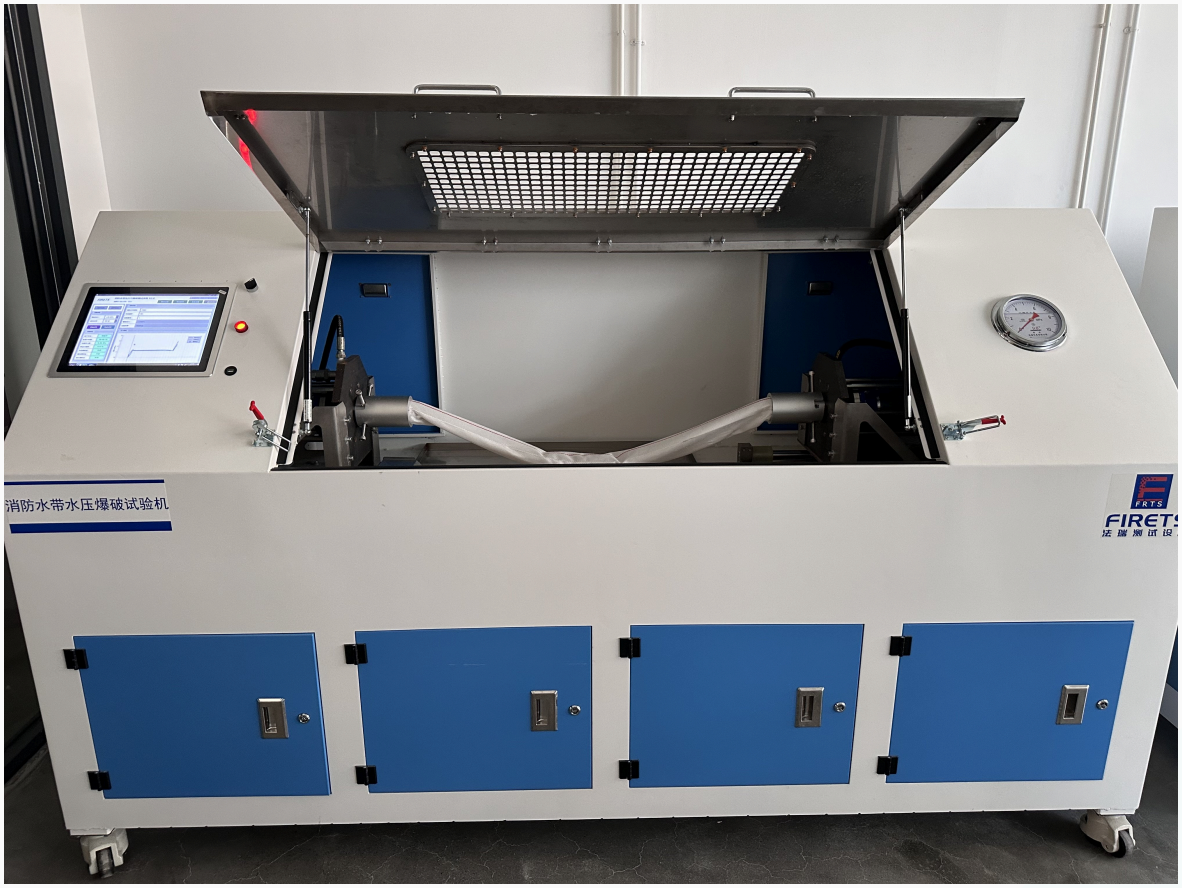

Original equipment photograph. Appearance only.

Sichuan Farui Testing Equipment Co., Ltd.

01 / PRODUCT / APPLICATION

Product purpose and selection

Perform pressure, hold and burst tests on lined fire hoses while recording the pressure response. The pump system, connections, fixtures and instrumentation are selected for the hose diameter and required procedure.

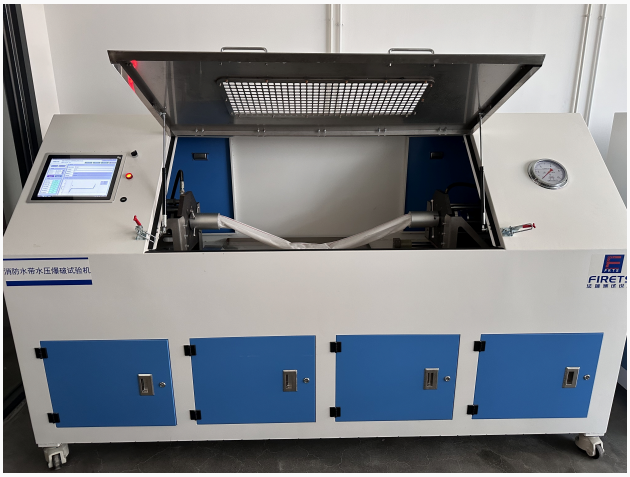

Original equipment photograph. Appearance only.

PRINCIPLE AND TEST OBJECT

Measurement principle

The hose is filled and air is removed before controlled pressurisation or pressure holding.

Original equipment photograph. Appearance only.

Measurement principle

The hose is filled and air is removed before controlled pressurisation or pressure holding. Leakage, failure and the pressure curve are recorded against the specimen information.

Use in the laboratory

Water supply and pressurisation, pressure sensor, control valves, specimen connections and a protected test area, with drainage and post-test cleaning provisions.

English edition follows the reviewed Chinese manuscript evidence. Configuration and laboratory conditions follow the technical file confirmed by both parties. Unconfirmed numerical claims from the Chinese edition are not restated here.

STANDARD EDITIONS

Standard edition

GB 6246 includes the relevant fire-hose performance requirements.

Standard edition

GB 6246 includes the relevant fire-hose performance requirements. Pressure resistance and bursting are different test tasks. Pressure, hold time and ramp programme depend on the hose type, grade and adopted edition.

Use in the laboratory

Record diameter, length, connection, filling and air-removal conditions. Retain the pressure curve, leakage location and failure mode, distinguishing specimen failure from fixture problems.

English edition follows the reviewed Chinese manuscript evidence. Configuration and laboratory conditions follow the technical file confirmed by both parties. Unconfirmed numerical claims from the Chinese edition are not restated here.

SPECIMEN AND PREPARATION

Specimens and conditioning

Fire-hose development and pressure-performance evaluation across specified hose sizes and connection types.

01 Specimens and conditioning

Fire-hose development and pressure-performance evaluation across specified hose sizes and connection types.

02 Use in the laboratory

Record diameter, length, connection, filling and air-removal conditions. Retain the pressure curve, leakage location and failure mode, distinguishing specimen failure from fixture problems.

English edition follows the reviewed Chinese manuscript evidence. Configuration and laboratory conditions follow the technical file confirmed by both parties. Unconfirmed numerical claims from the Chinese edition are not restated here.

TEST SEQUENCE

Test sequence

The hose is filled and air is removed before controlled pressurisation or pressure holding.

01 Test sequence

The hose is filled and air is removed before controlled pressurisation or pressure holding. Leakage, failure and the pressure curve are recorded against the specimen information.

02 Use in the laboratory

Record diameter, length, connection, filling and air-removal conditions. Retain the pressure curve, leakage location and failure mode, distinguishing specimen failure from fixture problems.

SOFTWARE AND TEST RECORDS

Control software and records

Record diameter, length, connection, filling and air-removal conditions.

Original equipment photograph. Appearance only.

What the screenshots show

These screenshots are original captures from the reviewed Chinese edition. They illustrate operating, recording or reporting functions available in that software. Displayed readings remain examples from the captured session.

How to read them

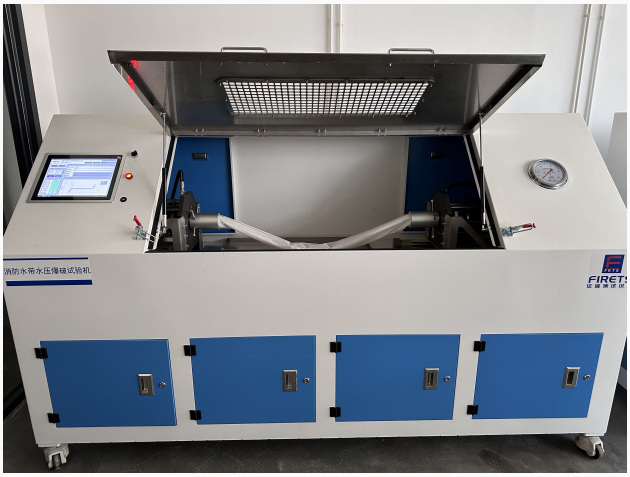

Record diameter, length, connection, filling and air-removal conditions. Retain the pressure curve, leakage location and failure mode, distinguishing specimen failure from fixture problems.

10 / COMPANY

High-tech enterprise

Sichuan Farui Testing Equipment Co., Ltd. holds a High-tech Enterprise certificate. Its work covers fire-protection and material fire-test equipment, measurement and control software, and laboratory system integration.

Original High-tech Enterprise certificate. Dates and identifiers follow the certificate as issued.

Certificate number

GR202551000122

Issue date

2025.12.02

Stated validity

Three years

Issue date and validity are shown as stated on the certificate.

11 / COMPANY

Quality management system

From technical requirements through on-site use, Farui organises instrument development, assembly and service within the certified management-system scope, connecting requirement confirmation, technical implementation and project delivery.

Original quality-management-system certificate. This is a company-system certificate, not product certification.

Certified standard

GB/T 19001-2016 / ISO 9001:2015

Certified scope

Research, assembly and service of industrial automatic-control system instruments

Registration number

30924Q0210R0S

Stated validity on the certificate

2024.06.06 — 2027.06.05

This page records the company management-system certificate. Coverage and current standing remain those registered by the certification body.

12 / COMPANY

Industry participation

As a senior member of the Smart Laboratory Professional Committee of the China Association for Standardization, Farui follows test standards and smart-laboratory practice, connecting industry exchange with instrument design, measurement and technical service.

会 员 证 书

兹批准 四川法瑞检测设备有限公司

为中国标准化协会智慧实验室专业委员会高级会员单位。

特发此证

发证日期： 2026 年 07 月 21 日

有效日期： 2027 年 07 月 20 日

编 号： CAS-D-260721-3182

发证机构： 中国标准化协会

Original senior-membership certificate of the Smart Laboratory Professional Committee.

Membership and organisation

Senior member, Smart Laboratory Professional Committee, China Association for Standardization

Issue date

2026.07.21

Stated validity on the certificate

2027.07.20

Membership is shown as registered on the original certificate and its stated validity date.

13 / COMPANY

Research and standards participation

Around flame retardancy, fire protection and measurement systems, Farui continues to accumulate instrument-design, automatic-control and test-method experience, using research and standards participation in technical discussion and system design for complex tests.

8 Invention patents (count)

4 Utility models (count)

4 GB/T participation (count)

From method to apparatus

Test conditions, measured quantities and use cases are translated into configuration options, with the test method as the starting point for technical discussion.

From signal to record

Data acquisition, control software and combined systems are organised so that original signals, operating conditions and reported results remain corresponding.

Figures follow the April 2026 company introduction. Patent applications are not distinguished from granted patents. Participation lists follow the corresponding documents.

CONTACT / FIRETS

Contact Farui

Discuss selection against the intended method, material and specimen form, measurement and reporting needs. Supply configuration and laboratory conditions follow the technical documents confirmed by both parties.
